# The Eureka Gasoline Co. Capital Stock \$200,000

Office, Room 4 Brown Building 822 Scott Street, Witchita Falls, Texas

The Eureka Gasoline Company is organized for the purpose of producing Gasoline from Casinghead gas, obtained from producing oil wells in the Burkburnett field. The plant site is selected and gas contracts are being secured rapidly. Our engineer will shortly begin actual operation, as all preliminary work has been done. We expect to deliver high-grade Gasoline to the loading rack in a short time after machinery is set up, and will positively pay a substantial dividend within 90 days after completion of plant.

# Casinghead Gasoline

The casinghead gasoline industry is new in Texas, but well established and well known in Oklahoma, where more than 100 plants are now in operation, and their success is established and notable because of total absence of failures. However, few plants have been built by private capital, because the large oil companies have dominated the industry in Oklahoma and Kansas. This is not the case, however, in the Burkburnett field. The Eureka Gasoline Company is one of the several to realize the possibilities in this field, where casinghead gas is exceptionally rich in gasoline content. Enormous fortunes have gone to waste in the Burkburnett field by casinghead gas evaporation. It will be the pleasing task of the Eureka Gasoline Company to harness this waste, and convert it into a commodity which will assist in turning the wheels of the world's industries and make handsome returns for all who secure stock in our enterprise.

# Liability of the Industry

Contrary to opinion in some quarters and to untrue and unintelligent reports circulated by stock salesmen for wildcat companies in competitive fields, the Burkburnett field will last for years, and still prove the Mecca for wise investors. Casinghead plants still show a fabulous profit from the fields where the pipe line runs show a 45 per cent decrease in production. This is accounted for by the fact that there is more evaporation in the oil sand after a decrease in actual oil production. Gas becomes rich with gasoline content as the well grows older, thus eliminating a possibility of gas failure.

# The World's Gasoline Supply and Consumption

Last year 6,000,000 motor cars consumed 60,000,000 barrels of commercial gasoline from the 90,-000,000 barrels produced. It is estimated that 1,000,000 more motors will be in operation this year. Gasoline motor power is being more rapidly applied in all lines of industry where power is used. Thus it is shown beyond a doubt that higher prices will prevail as the demand increases. The following statement was made by the general manager of one of Tulsa's principal refineries, in an interview published in a leading newspaper of Texas, on March 2, 1919.

"Not only are the governments of the various countries that have been at war using more gasoline at the present time than during actual fighting, but the people themselves are becoming restless on account of being deprived of the privilege of motoring and will welcome the opportunity to purchase gasoline in large quantities during the coming season.

"This country also is going to use fully 25 per cent more gasoline than it did last year, which means that it is going to be a very hard matter to supply the demand. For my part, I cannot figure out how this demand is going to be met, and the rush ought to begin within the next 30 days.'

## Attractive Possibilities of Profit

The profits to the investor in casinghead gasoline stock are limited only to the extent of plant capacity. It is the ultimate intention of the Eureka Gasoline Company to add units to our plant until we have several million cubic feet capacity daily, thereby producing from two to six tank cars of gasoline weekly, which, marketed at the present price, will show an enormous profit. There are small plants in Oklahoma which realize a profit of \$30,000 monthly. We know of some plants that have paid a 15 per cent dividend every 90 days since completion. We have reliable authority for the statement that several large oil producers paid their entire overhead expenses last year from the profit of their casinghead gas plants operated in the Cushing field. We know of a lady of Sapulpa who receives a monthly dividend of \$100 on an investment of only \$250.

# Here Is Our Proposition

We are offering a limited number of shares of stock at \$50 per share, which, after the plant housing, storage tanks and gas lines are advanced toward completion, the stock will be advanced in price. As a special inducement we offer a 5 per cent discount for all mail orders secured through this advertisement. Fill out the application blank below, attach draft, check or money order mail promptly—and we will immediately mail certificate.
